

## PRODUCT RELEASE – C

**Issue:** 021  
**Date:** 30<sup>th</sup> April 2010

**Catalogue Section:** Drawer Systems  
**Product Manager:** Keiran Lowden

**Subject:** New FGV Zeta Slowmotion Mechanism for Metal Drawers

We are pleased to announce the release of another new product from FGV Italy – Zeta. Zeta is a fully integrated soft closing mechanism for use on single sided metal drawers providing true soft close functionality at a fraction of the cost of more expensive soft close solutions. Zeta can also be easily retrofitted to existing installations making it a true add-on product. Zeta is suitable for the FGV Uniset range of metal drawers as well as other well known brands in the market.

### **Technical Information**

The Zeta comprises 2 separate components, the soft close mechanism (59071001Z0X0020), and the trigger bracket which is available in two different styles to suit either FGV Uniset drawers (5907SD05Z000020) or other brands (5907SD05ZU00020).

## Assembly

The spring loaded soft close mechanism which features a silicon oil piston is mounted to the cabinet carcass, under the cabinet member whilst the trigger brackets are mounted to the underside of the drawer. As the drawer is opened, the soft close mechanism is engaged and primed and then triggered on the closing of the drawer where the piston dampens the closing action of the drawer.

A brochure covering the new Zeta from FGV is available for download from the Artia website ([www.artia.com.au](http://www.artia.com.au)).
