PRODUCT RELEASE - C

Issue: 032
Date: 29th of September 2010

Catalogue Section: Seating Outdoor
Product Manager: Troy Searle

Subject: New Additions to Poly Chair Range

We are pleased to announce the introduction of new additions to our plastic chair range. With feedback from customers wanting a range of economical chairs, a more complete offering of affordable poly chairs will be stocked now and in the future of these chairs to sell to the market.

All the polypropylene mouldings have a fine etched stipple finish on all exterior surfaces, which gives the chairs and even satin look. The overall appearances of the mouldings are acceptable however some minor flow lines are visible due to the material flow complexities caused in the manufacturing process due to entrapped gas. Manufacture date clocks are provided on all mouldings located underneath the seat to identify when the chairs were produced.

The general appearance of all chairs is very good with the shells providing stylish flowing lines. All designs have utilised these flowing lines to provide reinforcing at the junction points where the legs are either as one piece or with anodised aluminium tube inserted. The seats have very good ergonomics which provide excellent lower back support and are comfortable to sit in.

There are no sharp edges and no potential hazardous features. The assembled chairs have some flexibility which is common in these types of chairs. The flexibility is considered to be acceptable and offer excellent impact resistance, resistance to low temperatures and resistance to UV radiation as per international tests certifications supplied by the manufacturers.

Note that all the poly chairs have been individually tested by the manufacturer to International and European standards. These test meanings are shown below with the tests displayed in the product specification pages further down on this release.

Test Certifications	Test Meanings	Country Tested
ANSI-BIFMA X5.1-2002	Seating durability test	USA standard for furniture
EN 1022:2005	Stability and overturning test	European standard
EN 1728:2000	Seating test methods for determination of strength and durability of the frame in domestic use	European standard
ENV 12520:2000	General mechanical, structural and safety requirement tests for indoor furniture used in domestic use	European standard
EN 581-1:2006	General safety requirements and tests for outdoor furniture seating used in public, domestic and camping	European standard
ENV 581-2:2000	Mechanical safety requirements and tests for outdoor furniture seating used in public, domestic and camping	Experimental European standard

All our new poly chairs are backed with a manufacturer’s warranty as detailed in product specifications further down the release. All meet the standards required by hotels, cafés, restaurants and resorts.

Below are the product specifications of each item;
