PRODUCT RELEASE - C

Issue: 031
Date: 22nd of September 2010

Catalogue Section: Seating Indoor
Product Manager: Troy Searle

Subject: Family of New Timber Chairs & Stools

We are pleased to announce the introduction of our new family range of timber chairs.

The chairs and stools are a medium duty item suitable for indoor café and restaurant style seating applications. All items picked are ergonomically formed to provide a good seating posture.

All shells are manufactured from preformed 11mm thick veneer plywood with 10 No. laminations. The ply is then smoothly sanded, stained and varnished with an abrasion resistant satin lacquer. The base plywood material will mark if impacted or rubbed with harder materials of sharp corners.

Our chairs are manufactured using genuine wood veneer, making every piece of furniture unique. As no two trees are alike, variations in colour and grain structure may occur from piece to piece of wood veneer. Exposure to daylight over a period of time will gradually change the colour of all veneers too; eg. dark veneers will lighten; light veneers will darken.

Note that all our plywood shells have been individually tested for strength before being finished to ensure piece of mind for all customers. The table below is the push test conducted on each plywood shell;

Push Test on Shell	Air Pressure	Equivalent to weight when pushed back
Waist width 200-250mm	250kgf/cm ²	53-55kgs
Waist width 250-350mm	250kgf/cm ²	60-62kgs
Waist width 350mm +	250kgf/cm ²	74-76kgs
Push test holding time: 6 seconds x 1 time		

Our own tests conducted showed the strength and rigidity of the chair shells could endure a mass of 90 kg being applied to the chair seat and a load of approximately 50 kg being applied horizontally, in a backwards direction, to the top of the chair back. The ply backs would flex about 25 mm, which is considered to be satisfactory.

The frames are setup in two designs and all are welded using steel tube and are finished in chrome plating. The smaller span seat ply chairs are constructed using 22mm diameter tube that is swage tapered down at the ends which provides a significantly stronger frame and is more rigid as a result. For the larger span seat ply chairs and stools, we use a heavier gauge tubular steel frame and welded support beams on the front and back of the frame. Both frames are considered stronger then current knock down assembly products on the market.

All items are packed in K.D. form. All chrome plated attachment screws and washers are supplied and these screws also attach the stacking bumpers. An Allen key is provided with each chair to aid assembly to assist our customers and provide them with a more user friendly product.

All our new timber chairs and stools are backed with a 12 month manufacturer's warranty and meet the standards required by hotels, cafés, restaurants and resorts.

Below are the product specifications of each item;

Torino

CODE	H	W	Unit			Weight	Seat Finish
			D	SH			
795.10011.001	800	500	510	450	4.3	 white
